## DETAILED ACTION

### *Priority*

1. Acknowledgment is made of applicant's claim for foreign priority under 35

U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No.

09/110,792, filed on 06 July 1998. **Specification**

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 12 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Oh (US 5,236,382).

Regarding claim 12, Oh ('382) teaches in column 4, lines 25-68 a method for, manufacturing an impregnated cathode having, a cathode pellet in which a pore portion of a sintered body of porous metal is impregnated with electron emitting material, comprising the steps of: placing the sintered body of porous metal and said electron emitting material in a container for impregnation in such a manner that said electron emitting material contacts with an entire surface of the sintered body of porous metal

when the electron emitting materials are melted; and impregnating the pore portion of said sintered body of porous metal with the electron emitting material.

Regarding claim 15, Oh ('382) teaches extra electron emitting materials are removed by shaking a container in which an impregnated cathode pellet and alumina balls are placed and washing by ultrasonic cleaning in water.

***Allowable Subject Matter***

5. Claims 13 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 13, the prior art of record neither shows nor suggest a method for manufacturing an impregnated cathode comprised of, in part, electron emitting materials are filled in a container for impregnation in such a manner that the depth of the electron emitting materials is uniform, and said sintered body of porous metal is located on the central portion in the direction of the depth of said electron emitting material -or located on the top of said electron emitting material.

Regarding claim 14, the prior art of record neither shows nor suggest a method for manufacturing an impregnated cathode comprised of, in part, the weight of said electron emitting material to be filled in the container for impregnation is in the range of 10 to 100

times as much as the impregnatable weight of the sintered body of porous metal in the container for impregnation.
